## Introduction

Thank you very much for purchasing the **Graupner** receiver **GR -16 HoTT**.

Read this manual carefully to achieve the best results with your HoTT system and first of all to safely control your models. If you experience any trouble during operation, take the instructions to help or ask your dealer or **Graupner** Service Centre.

Due to technical changes, the information may be changed in this manual without prior notice. Be always updated by checking periodically on our website, **www.graupner.de** to be always uptodate with the products and firmwares.

This product complies with national and European legal requirements.

To maintain this condition and to ensure safe operation, you must read and follow this user manual and all the safety notes before using the product!

### Note

This manual is part of that product. It contains important information concerning operation and handling. Keep these instructions for future reference and give it to third person in case you gave the product.

---

## Service centre

### Graupner Central Service

Graupner/SJ GmbH  
Henriettenstraße 96  
D-73230 Kirchheim/Teck

For the service centers outside Germany please refer to our web site **www.graupner.de**.

---

## Intended use

The receiver only be used for the purpose specified by the manufacturer for operation of remote control models without passengers. Any other type of use is impermissible and may damage the system and cause significant property damage and/or personal injury. No warranty or liability is therefore offered for any improper use not covered by these provisions.

In addition, it is explicitly pointed out that you must inform yourself about the laws and regulations applicable at your respective starting point before starting the remote control operation. Such conditions may differ from state to state, but this must be followed in every case.

### Note

Read through this entire manual before you attempt to install or use the transmitter.

## Target group

The item is not a toy. It is not suitable for children under 14. The installation and operation of the receiver must be performed by experienced modellers. If you do not have sufficient knowledge about dealing with radio-controlled models, please contact an experienced modeller or a model club.

---

## Package content

- 8 channel receiver **GR-16 HoTT 2.4 GHz**
- Manual

---

## Technical data

Antenna	2x cable 145 mm, of which last 30 mm active
Operating voltage	(2.5) 3.6 ... 8.4 V
Frequency range	2400 ... 2483.5 MHz
Modulation	2.4 GHz FHSS
Number of controls	8
Current consumption approx.	70mAh
Temperature range	-15 ... +70°C
Dimensions approx.	46 x 21 x 14 mm
Weight approx.	12 g

---

## Symbol description

Always observe the information indicated by these warning signs. Particularly those which are additionally marked with the words **CAUTION** or **WARNING**.

The signal word **WARNING** indicates the potential for serious injury, the signal word **CAUTION** indicates possibility of lighter injuries.

The signal word **Note** indicates potential malfunctions.

**Attention** indicates potential damages to objects.

---

## Safety notes

These safety instructions are intended not only to protect the product, but also for your own and other people's safety. Therefore please read this section very carefully before using the product!.

- Do not leave the packaging material lying around, this could be a dangerous toy for children.
- Persons, including children, with reduced physical, sensory or mental capabilities, or lack of experience or knowledge, or not capable to use safely the receiver must not use the receiver without supervision or instruction by a responsible person.
- Operation and use of radio-controlled models needs to be learnt! If you have never driven such a model, then start extra carefully and make sure to be familiar with the reactions of the model to the remote control commands. Proceed responsibly.

- First, always perform a range and function test on the ground (to do so, hold your model tight), before you use your model. Repeat the test with running motor and with short throttle bursts.
- Only use the components and spare parts that we recommend. Always use matching, original ***Graupner plug-in connections of the same design and material.***
- Make sure that all of the plug-in connections are tight. When disconnecting the plug-in connections, do not pull the cables.
- Protect the receiver from dust, dirt, moisture and foreign parts. It must be protected from vibration as well as excessive heat or cold. The models may only be operated remotely in normal outside temperatures such as from -10°C to +55°C.
- Always use all your HoTT components only with the latest firmware version.
- If you have questions which cannot be answered by the operating manual, please contact us or another expert in the field.

For your safety by handling the transmitter and the receiver

#### **WARNING**

**Also while programming the transmitter, make sure that a connected motor cannot accidentally start. Disconnect the fuel supply or drive battery beforehand.**

#### **CAUTION**

**Avoid every kind of short-circuit in all sockets of the transmitter! Risk of fire! Use only the suitable connectors. In no case the electronic component of the transmitter or of the receiver may be changed or modified. Due to licensing reasons, any reconstruction and/or modification of the product is prohibited.**

#### **Note**

During transport protect the model and the transmitter from damages.

For your safety by handling the batteries

### CAUTION

- **Protect the batteries from dust, dirt, moisture, heat and vibrations. Only use in dry locations.**
- **Do not use any damaged battery.**
- **Batteries may not be heated, burned, short-circuited.**
- **If handled improperly, there is a danger of fire, explosion, irritation and burns.**
- **Leaked electrolyte is caustic and should not be touched or come into contact with your eyes. In case of emergency, rinse with a large quantity of water and consult a Med. Doctor.**
- **Stock the batteries in dry and fresh conditions.**
- **Dispose of the battery in the proper disposal centers.**

---

## Installation

The receiver must be protected against dust, exhaust gases, splash water, etc. in the model. When you install your receiver, make sure that it is not excessively airtight to prevent it from overheating during operation.

Servo cables may not be wound around antennas or run next to them. Make sure that the cables cannot shift to lie directly adjacent to antennas during flight.

In the case of carbon fibre fuselage, at least the last 35 mm of the antennas shall be routed from the fuselage.

---

## Connections

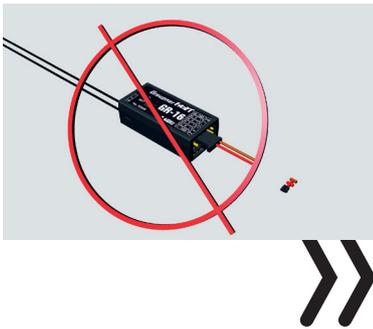

Connect the devices that have to be connected to the receiver to the row of sockets on one end of the receiver. The servo connections of the **Graupner**-HoTT receiver are numbered.

The polarity of the plug-in system cannot be reversed. Do not apply force.

## Power supply

For the battery connection are designated the ports 1 and 6, they are also provided with an additional "B". In principle, however, you can connect a battery to any free socket. By V- or Y-cable, but also with any remote control component. We recommend that you connect the power supply to the socket(s) close to the servos already connected to the receiver. If you wish to connect multiple separate batteries, the batteries must be of the same nominal voltage and capacity.

Never connect different battery types or batteries with strongly different charges since this can cause an effect similar to a short circuit. In such cases for safety reasons, insert voltage stabilizing elements such as PRX-5A (No. 4136) receiver power supplies between the batteries and receiver.

#### Attention

When selecting and connecting a power supply, be aware that although the operating range of the receiver ranges from 3.6 to 8.4 V. However, practically all of the previously marketed servos, speed controllers, gyros, etc. as well as many which are offered today have a permissible operating voltage range of 4.8 to 6 V.

---

## binding

To establish a connection with the transmitter, the **Graupner** HoTT receiver must first be "bound" to at least one model memory in "its" **Graupner** HoTT transmitter. This process is generally called "binding".

### *Binding step by step*

1. Prepare the transmitter to be bound according to its instructions for binding.
2. Switch the receiver power supply on.  
The LED of the GR-16 HoTT receiver blinks in red with a slow rhythm.
3. Push and hold for about three seconds the SET button on the receiver.  
After this time has elapsed, the LED flashes red and green simultaneously for a further approx. three seconds. During this time, the receiver is in bind mode.
4. Start the transmitter-side binding according to the instructions of the transmitter.
5. If the LED of the receiver starts to light constantly green within approximately three seconds, the binding process has been completed successfully.

Your transmitter/receiver combination is ready for operation.

If the LED flashes slowly red, the "binding" has failed. Change the positions of the associated antennas and try the entire procedure again.

---

## Display and adjusting the receiver settings

```
TELEMETRIE
▶ EINSTELLEN, ANZEIGEN
  SENSOR
  ANZEIGE HF STATUS
  AUSWAHL ANSAGEN
  RX DATA      EIN
  ALARMEINSTELLUNG
```

The settings of the receiver can be displayed with a suitable HoTT transmitter or the SMART-BOX and some can also be changed. Refer to the "Telemetry" section for detailed descriptions.

# Special features of the GR-16 HoTT receiver

## Connection 6

### 6CH FUNCTION

Depending on the settings in the "6CH FUNCTION" line of the "RX DATAVIEW" page of the telemetry menu, the output 6 can be used to connect RC components or a circuit for voltage measurement. Carry out the changeover as described in the instructions for the transmitter or the SMART-BOX.

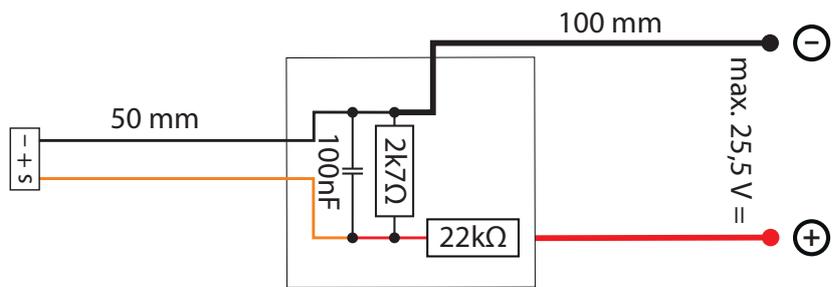

- SERVO

The connection 6 is suitable for the operation of RC components.

- BATT V

After switching as described before, a DC voltage of max. 25,5 V can be displayed instead of the receiver voltage. This way it is possible to monitor the main battery voltage without using external sensors. The ESCs S3082 and S3083 have this switch already included.

```
RX DATAVIEW V6.39 >  
S-QUA100%S-dBM-030dBm  
S-STR100% R-TEM.+28°C  
L PACK TIME 00010msec  
R-VOLT :05.0V  
L.R-VOLT:04.5V  
  
6CH FUNCTION:SERVO
```

#### Attention

Never connect a power supply with an output voltage higher than 8,4 V directly to a connection port of the receiver! The receiver and all connected devices would be immediately destroyed.

```

RX SERVO TESTV6.39<
>ALL-MAX : 2000µsec
ALL-MIN : 1000µsec
TEST : STOP
ALARM VOLT : 3.8V
ALARM TEMP+ : 55°C
ALARM TEMP- : -10°C
CH OUTPUT TYPE: ONCE
    
```

## CH OUTPUT TYPE

Depending on the settings in the "CH OUTPUT TYPE" line of the "RX SERVO TEST" page of the telemetry menu, the output 8 can be used for different scopes. Carry out the changeover as described in the instructions for the transmitter or the SMART-BOX.

By setting ...

- ONCE or SAME
  - to connect a servo, ESC, Gyro, etc...
  - ONCE
    - The servo connections of the receiver are actuated sequentially. The receiver power supply is less stressed.
  - SAME
    - The servo connections of the receiver are actuated in a 4 pcs block synchronic. The simultaneous start-up of up to four servos has a noticeably higher load on the receiver power supply.
- SUMO, SUMI or SUMDHD08
  - to connect a sum signal cable
  - SUMO
    - PPM modulated sum signal "OUT" of the control channel 04 to max. 16.
  - SUMI
    - Sum signal "IN" in case of satellite receiver
  - SUMD
    - Digital sum signal of the control channel 04 to max. 16.
    - HD: Hold the last servo position in case of Fail-Safe
    - FS: Moving to the programmed positions in case of Fail-Safe
    - OF: (OFF) switch-off of the SUMD signal in case of Fail-Safe

---

## Declaration of conformity

**Graupner/SJ** hereby declares that the **GR-16 HoTT** radio system complies with Directive 2014/53/EU.

The full text of the EU Declaration of Conformity is available at the Internet address **[www.graupner.de](http://www.graupner.de)**.

---

## Notes on environmental protection

If this symbol is on the product, instructions for use or packaging, it indicates that the product may not be disposed with normal household waste once it has reached the end of its service life. It must be turned over to a recycling collection point for electric and electronic apparatus.

Individual markings indicate which materials can be recycled. You make an important contribution to protection of the environment by utilizing facilities for reuse, material recycling or other means of exploiting obsolete equipment.

---

## Care and maintenance

The product does not need any maintenance. Always protect it against dust, dirt and moisture.

Clean the product only with a dry cloth (do not use detergent!) lightly rub.

---

## Warranty

*Graupner/SJ* GmbH, Henriettenstrasse 96, 73230 Kirchheim/Teck grants from the date of purchase of this product for a period of 24 months. The warranty applies only to the material or operational defects already existing when you purchased the item. Damage due to misuse, wear, overloading, incorrect accessories or improper handling are excluded from the guarantee. The legal rights and claims are not affected by this guarantee. Please check exactly defects before a claim or send the product, because we have to ask you to pay shipping costs if the item is free from defects.

These operating instruction are exclusively for information purposes and are subject to change without prior notification. The current version can be found on the Internet at **[www.graupner.de](http://www.graupner.de)** on the relevant product page. In addition, the company ***Graupner/SJ*** has no responsibility or liability for any errors or inaccuracies that may appear in construction or operation manuals.

Not liable for printing errors.
